About the course

Cybersecurity with AI is a career-focused programme at **Akbar's Academy I.T. Institute** that builds foundational skills to protect systems, identify security risks and understand modern cyber threats.

You'll learn **security principles, common attacks and phishing, network and endpoint security, access control, log analysis, vulnerability assessment, SIEM and incident response**, with **AI-assisted** threat detection and reporting. You'll finish by analysing sample security logs and preparing an incident report in a controlled lab.

Career-focused IT education
Skills aimed at real job roles

Practical learning
Hands-on work and a portfolio project

AI-powered skills
AI-assisted threat detection and security reporting

COURSE OBJECTIVE

Develop foundational skills to protect systems, identify security risks and understand modern cyber threats using AI-assisted security analysis.

Course at a Glance

COURSE FEE

₹70,000

Cybersecurity with AI

TRACK

Premium technical specialization

An in-depth technical path into cybersecurity.

SYLLABUS

12 learning modules

Including a hands-on practical project.

MAIN FOCUS

Threat detection & system security

Protect systems and respond to threats.

IDEAL FOR

Students interested in digital security

Anyone who wants to defend systems and data.

OUTCOME

A professional incident report

Built from real log analysis in a controlled lab.

DURATION & BATCHES

Ask the academy

Contact the academy for current batch duration and timings.

What the fee covers

- Network security
- Vulnerability assessment
- SIEM
- Incident response
- AI-assisted threat analysis

Learning Approach

How the course takes you from first concepts to a job-ready portfolio.

Step 1 · Theory
01

Core security principles and industry fundamentals.

Step 2 · Practical Sessions
02

Guided exercises and tool demonstrations in controlled lab environments.

Step 3 · AI Integration
03

AI-assisted threat detection and security reporting, used responsibly.

Step 4 · Projects
04

At least one portfolio-ready project: log analysis and an incident report.

Step 5 · Career Preparation
05

CV guidance, interview practice and project presentation.

Your course roadmap

Fundamentals › Threats › Network › Endpoint › Access › Monitoring ›
Vulnerabilities › SIEM & IR › AI Detection › Malware › Ethics ›
Capstone Project

Lab safety: All security testing should be performed only on authorized systems and controlled lab environments.

Detailed Curriculum

What you will learn

Modules 01 – 06 of 12

01

FOUNDATIONS

Cybersecurity fundamentals and security principles

The core ideas of cybersecurity, and the principles used to keep systems and data safe.

02

THREATS

Common cyberattacks, phishing and social engineering

Recognise the most common attacks, and how phishing and social engineering trick people.

03

NETWORK

Network security and firewall fundamentals

Protect networks and control traffic with firewalls.

04

ENDPOINT

Operating system and endpoint security

Secure computers, operating systems and devices against threats.

05

ACCESS

Password security, MFA and access control

Strong passwords, multi-factor authentication and controlling who has access.

06

MONITORING

Security monitoring and log analysis

Watch systems for suspicious activity and investigate security logs.

Detailed Curriculum

What you will learn

Modules 07 – 12 of 12

07

ASSESSMENT

Vulnerability assessment fundamentals

Find and assess weaknesses in systems before attackers do.

08

RESPONSE

Introduction to SIEM and incident response

Use SIEM tools to spot incidents, and follow a clear process to respond.

09

AI SKILLS

AI-assisted threat detection and security reporting

Use AI tools to help detect threats and write clear security reports.

10

MALWARE

Malware awareness and safe investigation practices

Understand malware and investigate it safely in a controlled environment.

11

GOVERNANCE

Data privacy, risk management and ethical responsibilities

Protect personal data, manage risk and act ethically as a security professional.

12

CAPSTONE

Practical project

Analyse sample security logs and prepare an incident report in a controlled lab.

Tools & Platforms

Security areas and tool types covered across the syllabus.

Firewalls
Network security

Endpoint Security
Devices & OS

MFA & Access Control
Identity

Log Analysis
Security monitoring

Vulnerability Assessment
Find weaknesses

SIEM
Detect incidents

Incident Response
Respond & recover

AI Security Tools
Threat detection & reports

Controlled Labs
Safe practice

PRACTICAL PROJECT

Analyse sample security logs and prepare an incident report in a controlled lab

Bring every module together in one portfolio-ready project, investigating security events from first alert to written report.

Collect logs › Detect › Analyse with AI › Contain › Report

Career Opportunities

Roles this course prepares you to pursue.

SOC Analyst Trainee
Monitor security operations

Cybersecurity Analyst Trainee
Analyse security risks

IT Security Support
Support secure IT systems

Security Operations Associate
Help run security operations

Junior Vulnerability Assessment Trainee
Assess system weaknesses

MAIN FOCUS
Threat detection and system security

IDEAL FOR
Students interested in digital security

Why choose this course

- Strong foundations in security principles and modern threats
- Network, endpoint, password, MFA and access security
- Security monitoring, log analysis and vulnerability assessment
- Introduction to SIEM and incident response
- AI-assisted threat detection and security reporting
- Safe, ethical practice in controlled lab environments

Fees & Enrollment

Cybersecurity with AI

Premium technical specialization

COURSE FEE

₹70,000

- Network security
- SIEM
- AI-assisted threat analysis
- Vulnerability assessment
- Incident response
- Controlled lab practice
